ZIVARO
BRILLIANT IT

Optimize On-Premise Workloads While **Simplifying IT Operations**

The amount of data continues to explode, data center IT teams are faced with the realities of increasing infrastructure needs and the best way to support them on-premise, in the cloud or with a hybrid approach. The data center is transforming, and your organization needs a new and smarter approach to tackle and distribute information. Opportunities exist to reduce your data center footprint while providing better performance and driving digital transformation for your organization

Zivaro provides you solutions to optimize workloads and scaling of infrastructure, while we simplify IT operations and reduce your data center footprint. We leverage this expertise, take a multi-vendor approach, and work closely with your team to find and implement solutions that provide increased efficiency and competitive advantage for your specific industry. Applications and data are the foundation of your organization's success, and they need to be secure. Our data center solutions offer the redundancy, scale, and resiliency, your organization needs effectively and securely.

- Compute & Storage Solutions
- Converged Infrastructure
- Data Center Migration Services
- Backup & Archival
- Modern Data Management
- Hyper-Converged Infrastructure (HCI)
- Virtualization/Containerization
- Disaster Recovery

Zivaro has two decades of experience working with thousands of clients across the Enterprise and Public Sector regulated markets supporting their data center requirements. Our data center engineering team has broad experience spanning many top server, storage, recovery, and software OEM's and maintain top level certifications to ensure we are current with the latest in data center innovation.

From virtualization, compute, and storage design and deployment services, to full-blown data center migrations and disaster recovery solutions, Zivaro's data center engineering team have you covered. With our experience in Application Centric Infrastructure (ACI) and designation from Cisco as an Advanced Data Center Architecture Specialization partner; Zivaro can assist your organization with meeting its diverse data center and compliance needs in the digital era.

Our approach results in a comprehensive enablement of data classification, protection and recovery

Data Obscurity	Phase 1: Data Discovery	Phase 2: Data Classification	Phase 3: Data Migration	Phase 4: Data Optimization	Data Efficiency

Operational Transformation

- Seamless data and workload mobility
- Better predictability for data growth, utilization, and performance
- Faster and more cost-effective test/dev cycles
- Avoidance of vendor/provider lock-in

Risk & Cost Avoidance

- Reduced financial impact from data misclassification, theft or downtime
- Faster recovery from ransomware attacks
- Increased agility responding to unforeseen risks
- Increased internal audit response times

Data Center Success Stories

- Designed and deployed a multi-site active/passive FlexPod based VDI solution leveraging native storage replication and performance features for 5000 users
- Complete data center migration for Fortune 100 financial services organization ultimately resulting in lower OpEx costs and internal disaster recovery data center elimination

- Provided an HCI solution for an E-911 call center to support critical business operations and ensure uptime
- Private cloud environment design and deployment for federal organization on a converged infrastructure solution supporting massive online transaction volume leveraging at rest and inflight storage encryption
